

FOR IMMEDIATE RELEASE

## Leading University Medical Center Looks to Kentah for IT Results

November 4, 2008, Albuquerque, NM

A renowned university medical center has contracted with Kentah to provide information technology (IT) project management support and direction. Under the terms of the contract, Kentah is providing Disaster Recovery Plan program management; a Medical Tissue Tracking System assessment; and support to develop and release a Patient Tracking System request for proposal (RFP). For each engagement, Kentah is providing project management resources to support and supplement the medical center's IT and project management staff.

The establishment and adherence to formal project management methodologies is critical to the successful implementation of nearly all information technology projects. The methodologies serve as guidance to the organization as it selects its projects; to the project teams as they plan their work; to organization management as they supply the necessary oversight; and to sponsors and customers as they collaborate in the design and delivery of new business systems.

"While tangential to our core service delivery offerings, each of these projects provides yet another example of Kentah's ability to provide our clients with the right resource, at the right moment, and the right price," says Geoff Duke, Kentah vice president of service delivery and corporate strategy. "We take pride in our ability to support our healthcare customers' requirements as they strive to improve the quality of their services through the efficient, effective use of technology."

### *About Kentah*

*Headquartered in Albuquerque, New Mexico, the Kentah Group is a premier IT Transformation Services and Support firm delivering IT Service Management and technology support throughout North America. The company's footprint of service locations throughout the U.S., Canada and Latin America enable the Kentah Group to provide local, reliable, and cost-effective IT support.
